

Empired User Secure Score

Help every individual protect your organisation

Our latest addition to your cybersecurity tool kit is the unique User Secure Score app. This product is a market first in creating user friendly cyber security awareness.

We know companies invest heavily in their cyber security in terms of training, software and hardware to keep their digital assets safe.

However, every member of your organisation can contribute to your security posture, not just dedicated cyber security experts. After all **human error causes 93% of all incidents and 84% of all breaches.**

By implementing the User Secure Score alongside Microsoft Teams, your organisation can be made aware of the impact their actions can have on keeping malicious attacks at bay.

The app combines decades of cybersecurity experience that Empired and Microsoft have accumulated to help your company. Your organisation will have a bird's eye view of the level of security compliance from your team.

How the Empired User Secure Score can help you

- + The User Secure Score app works seamlessly with Microsoft teams for easy use and reference.
- + Empired can work with you to customize your dashboard to your company's security needs and advise on how to remediate risks.
- + It collects evidence of completed security measures and outstanding tasks all in an easy-to-read dashboard.
- + It will prioritise your team's security posture and help security leaders identify incomplete tasks that may compromise your company.

empired

Part of Capgemini

Empired manages the User Secure Score on your behalf as a service.

We will implement the application in a dedicated Azure subscription in the data centre of your choice. As part of the service, we will continually add new measures and manage the underlying data structure.

The Empired User Secure Score queries the Microsoft graph and other APIs and then calculates a user secure score for a set of security measures / controls.

The score is then presented to the user in Teams indicating the user's score, their team score average and the organisations average score.

The app also provides the user with a list of controls they can implement to increase their score and step-by-step instructions on how to add these to increase their personal security score.

Your snapshot of your organisation's security score is easily accessed at any time. Empired will be on hand to recommend what action to take to ensure that incomplete tasks are implemented.

We will also provide up to date information on new threats and strategies to implement within this easy-to-use and adaptable framework.

To implement our market leading User Secure Score Dashboard, contact us today to help every individual in your business protect your digital assets.
